PROJECT DEMONSTRATION

Car Rental Request Automation

Service Catalog and Flow Designer on ServiceNow

Email chains leave three people stuck

Employee

Sends emails and calls, retypes dates and locations, and cannot see the status of the request.

Manager

Approval requests are scattered across inboxes, so they are missed or delayed.

Fleet administrator

Tracks cars in spreadsheets, which causes double bookings and errors.

No standard form, no approval routing, no central record, no notifications.

One catalog form starts a fully automated flow

1

Catalog form

Date, pick-up, drop, duration, car type, reason

2

Manager approval

Primary approval with email notice

3

Car approval

Secondary approval and availability check

4

Fulfillment task

SCTASK sent to the Transport team

5

Notify and close

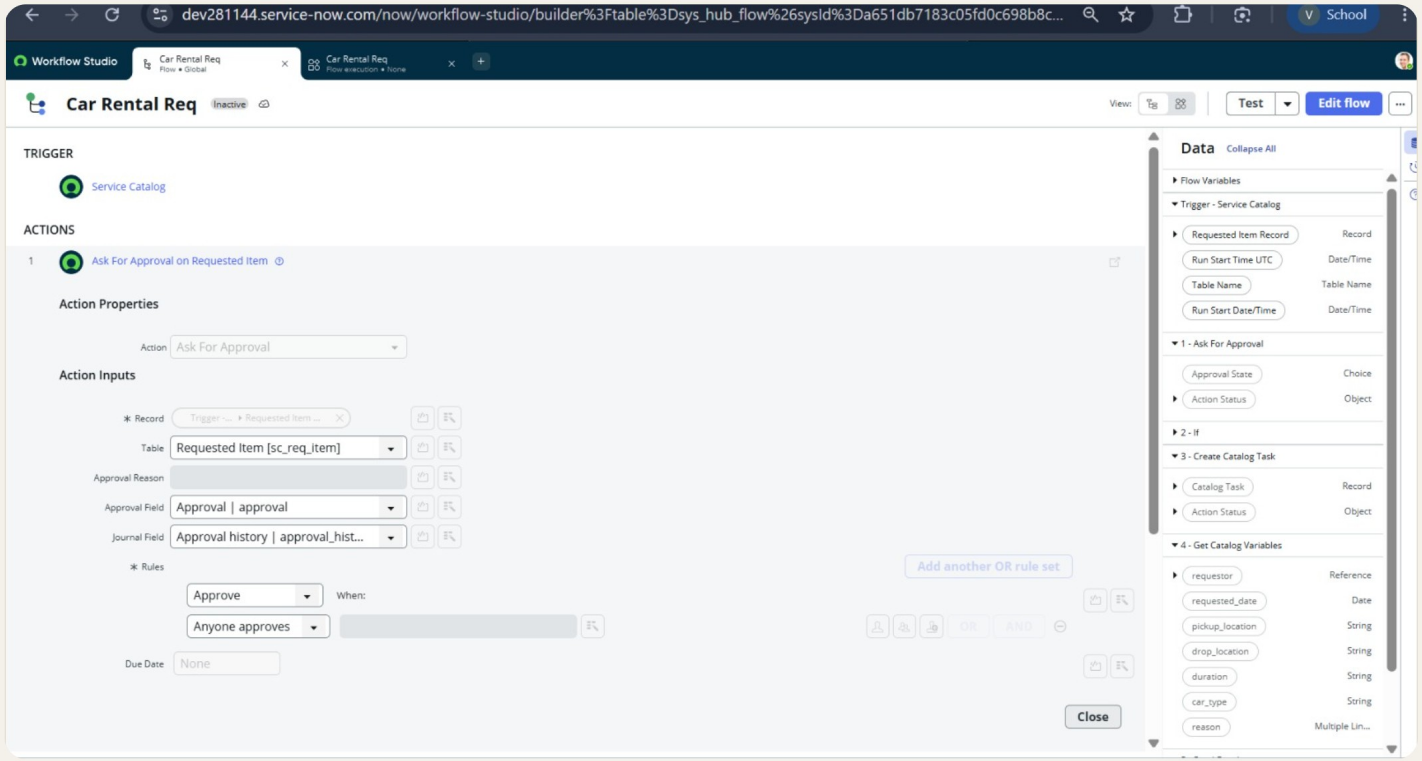

Updates at every stage, then closure

Built only with native ServiceNow features and delivered through an Update Set.

Three layers on one platform

Presentation	Service Portal and Service Catalog for employees, managers, approvers and the Transport team.
Automation	Flow Designer flow with Business Rules and client scripts: approvals, availability check, tasks, notifications.
Data and platform	sc_request, sc_req_item, sc_task, sysapproval_approver, Car Inventory table, ACLs and Update Set.

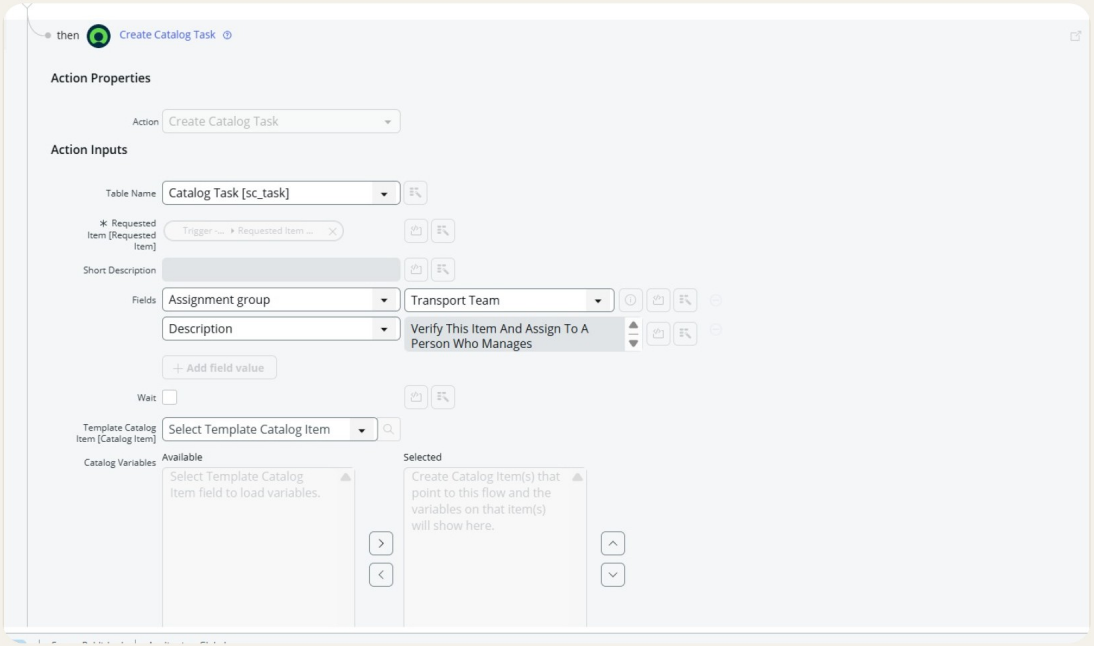

Build: the Car Rental Req flow

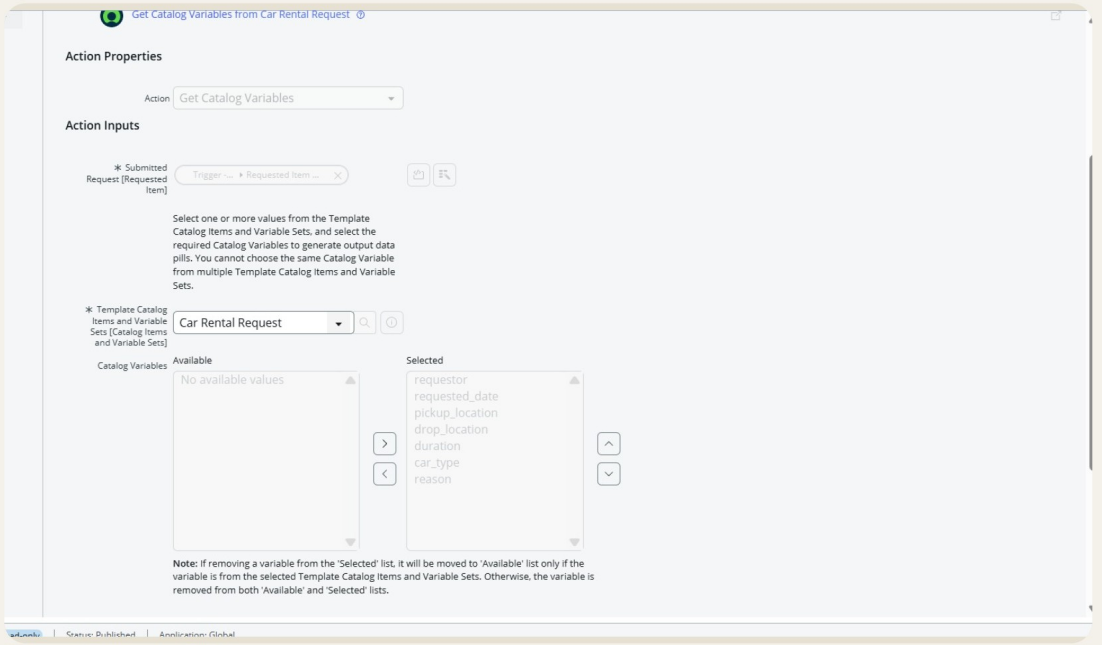

Flow Designer

- Trigger: Service Catalog
- Action 1: Ask For Approval on the requested item
- Rule: Approve when anyone approves

Build: task assignment and request data

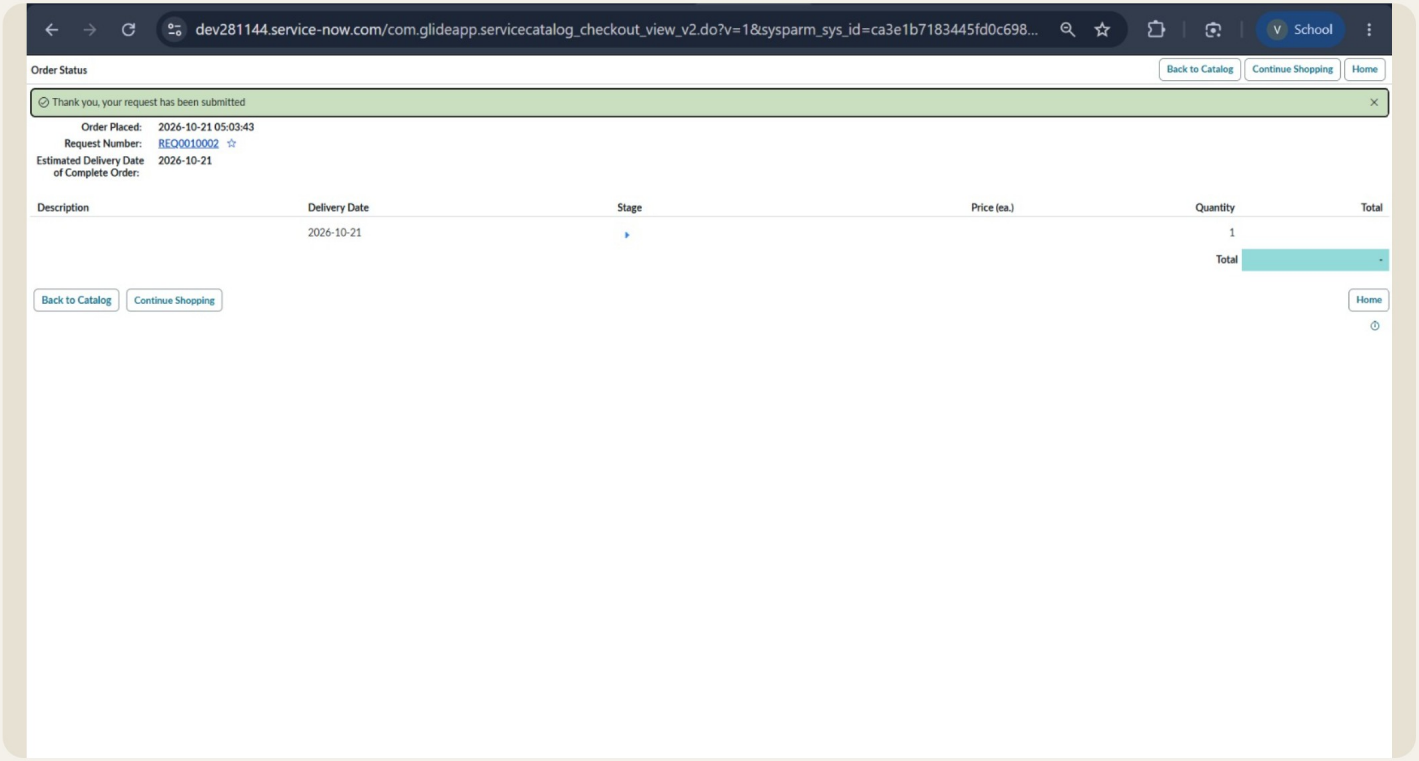

Create Catalog Task: assignment group set to Transport Team.

Get Catalog Variables: requestor, date, pick-up, drop, duration, car type, reason.

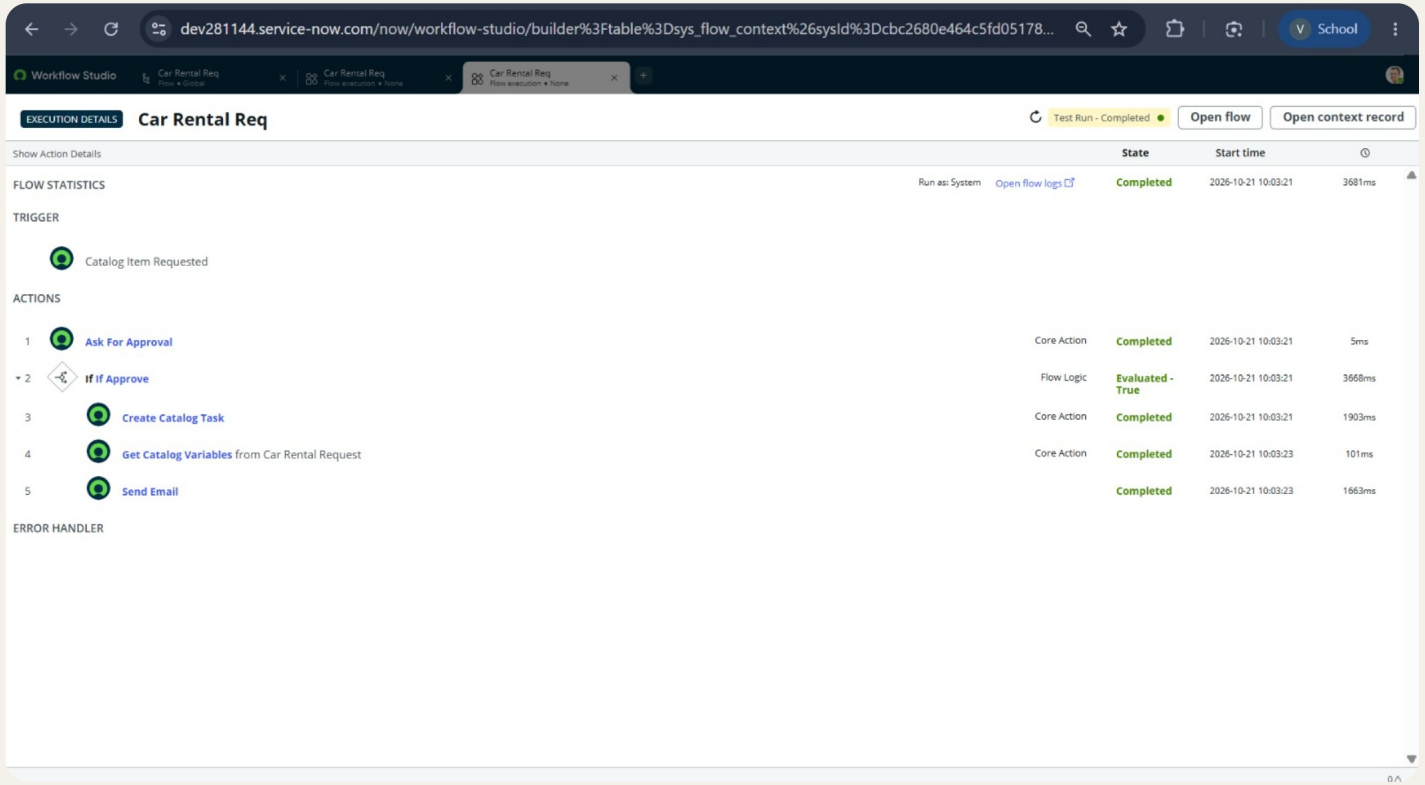

Demo step 1: submit the request

REQ0010002

- Order Now submits the form
- Confirmation message appears
- Request number is issued

Demo step 2: the flow runs end to end

Execution: Completed

- Ask For Approval: completed
- If Approve: evaluated True
- Create Catalog Task, Get Catalog Variables and Send Email: completed

Live demo: four scenarios, all passed

Scenario	What we show	Result
1. Submit	Fill the form and click Order Now	REQ0010002 created
2. Flow and email	Flow creates REQ and RITM, emails the administrator	Email received
3. Approval	Administrator approves in the Approvals list	RITM0010003 Approved
4. Verify	User opens the requested item	Closed Complete

Planned in four sprints, validated end to end

26	63	4	5/5
user stories	story points	sprints of 6 days	test cases passed

Setup and catalog item, then approvals and notifications, then security and testing, then deployment and documentation.

Benefits and next steps

Benefits

- Faster approvals and allocation
- Fewer errors and double bookings
- Clear status and full audit trail

Future scope

- Vendor and agency integration
- Reuse for travel and hotel requests
- Mobile and cost analytics

Ready for deployment through an Update Set. Thank you.
