Ideation Phase — Define the Problem Statements

Customer Problem Statement

Date	2 October 2026
Team ID	———————————————
Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	2 Marks

Customer Problem Statement

A customer problem statement describes a problem from the customer's own point of view. Writing it keeps the team centred on what matters to people and helps us design something they will actually want to use.

A clear statement also builds empathy: it shows how customers experience the current service and where it lets them down.

Project Context

At present, staff who need a rental car for official travel ask for it through email, phone calls or shared spreadsheets. Requests often miss dates, places or car preferences, approvals get overlooked in busy inboxes, and nobody can see where a request stands. This project replaces that routine with an end-to-end ServiceNow solution built on a Service Catalog item, Flow Designer flows, approvals, business rules, client scripts and email notifications.

Customer Problem Statement (for this project)

I am	A company employee who travels for work — client meetings, site visits or official assignments — and needs a rental car.
I'm trying to	Submit a car rental request with accurate dates, pick-up and drop-off points and car type, see it approved, and get a vehicle allocated without chasing anyone.
But	Requests go through email, calls or spreadsheets, details are missing, approvals stall, and I have no way of seeing the current status.
Because	There is no standard request form, no automatic approval routing, no central view of fleet availability and no automated notifications.
Which makes me feel	Frustrated and uneasy about short-notice trips, unsure whether a car will be ready, and unwilling to depend on the process.

Problem Statements by Role

No.	I am	I'm trying to	But	Because	Which makes me feel
PS-1	An employee travelling on	Request a rental car for	I must email or call and wait, and the	There is no standard catalog	Frustrated and uncertain

No.	I am	I'm trying to	But	Because	Which makes me feel
	business	set dates and places	request often lacks key details	form with mandatory fields and no status tracking	
PS-2	A manager / approver	Review and approve my team's car rental requests	Requests are scattered across email, so I miss or delay them	There is no automatic approval routing, reminder or single approval queue	Overloaded and out of control
PS-3	A fleet / transport administrator	Assign an available car to each approved request	I track cars and bookings by hand in spreadsheets, which leads to clashes and errors	No central record connects requests, approvals, vehicles and notifications	Stressed and prone to mistakes

How the Solution Addresses These Problems

- PS-1: A Service Catalog item with mandatory variables, date validation through a client script, and request tracking via the Request and Requested Item (RITM) records.
- PS-2: Flow Designer creates the manager's approval automatically, sends an email alert and issues reminders while the approval is pending.
- PS-3: Each approved request generates a fulfillment task for the fleet team, the allocated car is recorded, and the requester is informed of every status change.
