Project Design Phase

Problem – Solution Fit Template

Date	10 October 2026
Team ID	———————————————
Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	2 Marks

Problem – Solution Fit Template

Problem-solution fit means you have identified a real problem faced by your customers and shown that your solution genuinely resolves it. The canvas helps teams spot behavior patterns and understand what will work, and why.

Purpose

- Solve complex problems in a way that suits the situation your customers are actually in.
- Gain adoption faster by building on the channels and habits people already use.
- Sharpen communication with the right triggers and messages.
- Create more touch-points with the organization by solving frequent, urgent or costly annoyances and so building trust.
- Understand the current situation so it can be improved for the target group.

Canvas

1. CUSTOMER SEGMENT(S) Employees who need a rental car for official travel, the managers who approve their requests, the transport / fleet team and ServiceNow administrators.	**6. CUSTOMER CONSTRAINTS** Slow approvals, a limited number of cars, tight travel dates and budgets, no tool for tracking, and the need to follow company travel policy.	**5. AVAILABLE SOLUTIONS** Requests by email or phone, spreadsheets and paper forms. Pros: people already know them. Cons: no tracking, missing or partial details, manual chasing, no audit trail.
2. JOBS-TO-BE-DONE / PROBLEMS Ask for a car quickly with the right details, get the manager's approval, have a vehicle assigned and be able to see the status. The transport team needs requests that arrive complete and clean.	**9. PROBLEM ROOT CAUSE** Requests come in through unstructured channels, approvals have to be chased by hand, there is no central record, and nothing connects the request, the approval and car availability.	**7. BEHAVIOR** Employees email or call the transport desk and keep following up; managers approve by replying or verbally. The team retypes the data into spreadsheets to keep track of bookings.

3 | 4. TRIGGERS | EMOTIONS: BEFORE / AFTER	10. YOUR SOLUTION	8. CHANNELS of BEHAVIOR
TRIGGERS: a business trip or client visit is planned, a deadline is close, or a manager asks for travel arrangements. BEFORE: frustrated, unsure and worried about delays. AFTER: confident, in control and satisfied with a clear status.	A ServiceNow Service Catalog item "Car Rental Request" backed by a Flow Designer workflow: manager approval, a car request approval with availability check, an SCTASK for the Transport team, notifications at each stage and a complete audit trail. Delivered through an Update Set.	8.1 ONLINE: Service Portal catalog form, request tracking page, email notifications and approval links. 8.2 OFFLINE: phone calls, walk-ups to the transport desk and verbal approvals, all replaced by a portal request with logged approvals.
